WARNING

DANGEROUS PROCEDURES

- Be sure the cam pin is installed in the bolt group. If it isn't, your rifle can still fire, but it could possibly explode, causing you harm.
- If you're using the blank ammo attachment, don't use any other ammo except the blank round, M200.
- DO NOT exchange or switch bolt assemblies from one M16A1 to another...It could cause damage to both you and the rifle.
- If your rifle stops firing with a live round in the chamber of a hot barrel, remove the round fast. However, during training, if you cannot remove it within 10 seconds, wait 15 minutes with the rifle pointing in a safe direction. This way you won't get hurt by a possible ammo cook-off, which could happen 10 seconds after contact with a hot chamber.
- Use only authorized ammo that is manufactured to U.S. specs.

- If your bolt fails to unlock and you try to free it by banging the butt stock on the ground, keep yourself clear of the muzzle.
- If there's water in the barrel, don't fire the rifle. It could explode.
- If a noticeable difference in sound or recoil is experienced, STOP FIRING. Either condition could indicate an incomplete propellant burn and a bullet still in the bore. Retract bolt slowly and remove fired cartridge case. Clear weapon and check for unburned powder grains in the receiver or bore and for a bullet in the bore. Remove unburned propellant or bullet from bore before resuming firing, or barrel could explode. If bullet is lodged in bore, turn in rifle to direct support maintenance.

IF YOU GO BY ALL THE INSTRUCTIONS IN THIS BOOK, AND PERFORM PREVENTIVE MAINTENANCE (PM), YOUR M16A1 RIFLE WILL SHOOT, AND SHOOT AND SHOOT. IF YOU'VE DONE YOUR PART AND IT STOPS SHOOTING, TAKE YOUR M16A1 RIFLE TO YOUR SERGEANT. HE HAS THE ANSWERS.

FACTS ABOUT

The M16A1 rifle system consists of a rifle, one magazine and a sling. It is a lightweight, gas operated, air cooled, magazine fed, shoulder fired weapon that can be fired either automatic or semi-automatic.

Other features:

- The barrel assembly has an adjustable sight and a flash suppressor.

- Upper and lower receivers are easily opened for cleaning and inspection.
- Bolt group and barrel extension designed with locking lugs that lock bolt group to barrel extension.

- An aluminum receiver reduces the weight of the rifle.

- Some rifles are equipped with the Low Light Level Sight to increase effectiveness during periods of limited visibility.

YOUR RIFLE

Weight:

w/20 rd mag 3.5 Kg. (7.6 lb.)

w/30 rd mag 3.6 Kg. (7.9 lb.)

Max effective rate of fire:

Semi: 45-65 rds per min

Auto: 150-200 rds per min

Max effective range:

460 meters

Max range:

2653 meters

CAUTION: Do not use tools to tighten attachment, HANDS ONLY

3. Slide into flash suppressor and HAND TIGHTEN

NOTE: After 50 rounds, check to see if it is still tight. Make sure to clean carbon buildup after each use

AMMUNITION

WARNING

DO NOT FIRE . . .

- Seriously corroded ammunition
- Dented cartridges
- Cartridges with loose bullets
- Cartridges exposed to extreme heat (135°) until they have cooled

Use only authorized ammo that is manufactured to US specs.

USE OF SELECTOR LEVER

safe

Rifle will not fire. Selector lever cannot be on safe unless rifle is cocked. Always place in SAFE, when loading and unloading

semi-automatic

Rifle will fire one round each time the trigger is pulled

automatic

Rifle will continue to fire until the magazine is empty or the trigger is released

CLEAR YOUR RIFLE

- 1 Place selector on SAFE. If weapon is not cocked, lever cannot be pointed toward SAFE.

- 2 Remove magazine

- 3 To lock bolt open, pull charging handle rearward, press bottom of bolt catch, allow bolt to move forward until it engages bolt catch. Return charging handle to forward. If you haven't before, place on SAFE.

- 4 Eyeball receiver and chamber to insure these areas contain no ammo

- 5 With selector lever pointing toward SAFE, allow bolt to go forward by pressing upper portion of bolt catch.

DISASSEMBLY
ALLOWED

CLEAN...INSPECT...LUBE

With the rifle disassembled, thoroughly clean, inspect and lube, so you have a reliable weapon you can always depend on.

After firing, clean your weapon for 3 consecutive days with Rifle Bore Cleaner (RBC). Wipe dry and lube according to lubrication instructions.

Cleaning materials: swabs, pipe cleaners and RBC are expendable items that are available from Company Supply.

If any parts are missing or defective see your ARMORER.

THOROUGH CLEANING

upper receiver

CLEAN WITH RBC

- All Areas of Powder Fouling, Corrosion, Dirt & RUST

- Bore & Chamber

- Locking Lugs

- Gas Tube

GO RIGHT THRU THE
FLASH SUPPRESSOR

BORE BRUSH (DON'T
REVERSE DIRECTION
WHILE IN BORE)

Use a worn bore brush to
get outside surface of
protruding gas tube (get
sides and bottom from
bottom of receiver)

THOROUGH CLEANING

bolt carrier group

- Outer & Inner Surfaces of Bolt Carrier
- Carrier Key
- Firing Pin Recess and Firing Pin
- Firing Pin Hole (Use Pipe Cleaner There)
- Carbon Deposits & Dirt from Locking Lugs
- Areas Behind Bolt Ring and Under Lip of Extractor

WORN BORE BRUSH

GET THAT
LAST 1/16"
TOO!

CARRIER KEY

THOROUGH CLEANING

lower receiver group

- All Areas of Powder Fouling, Corrosion and Dirt

- Wipe Dirt from Trigger Mechanism

- Clean Buffer and Inside Lower Receiver Extension

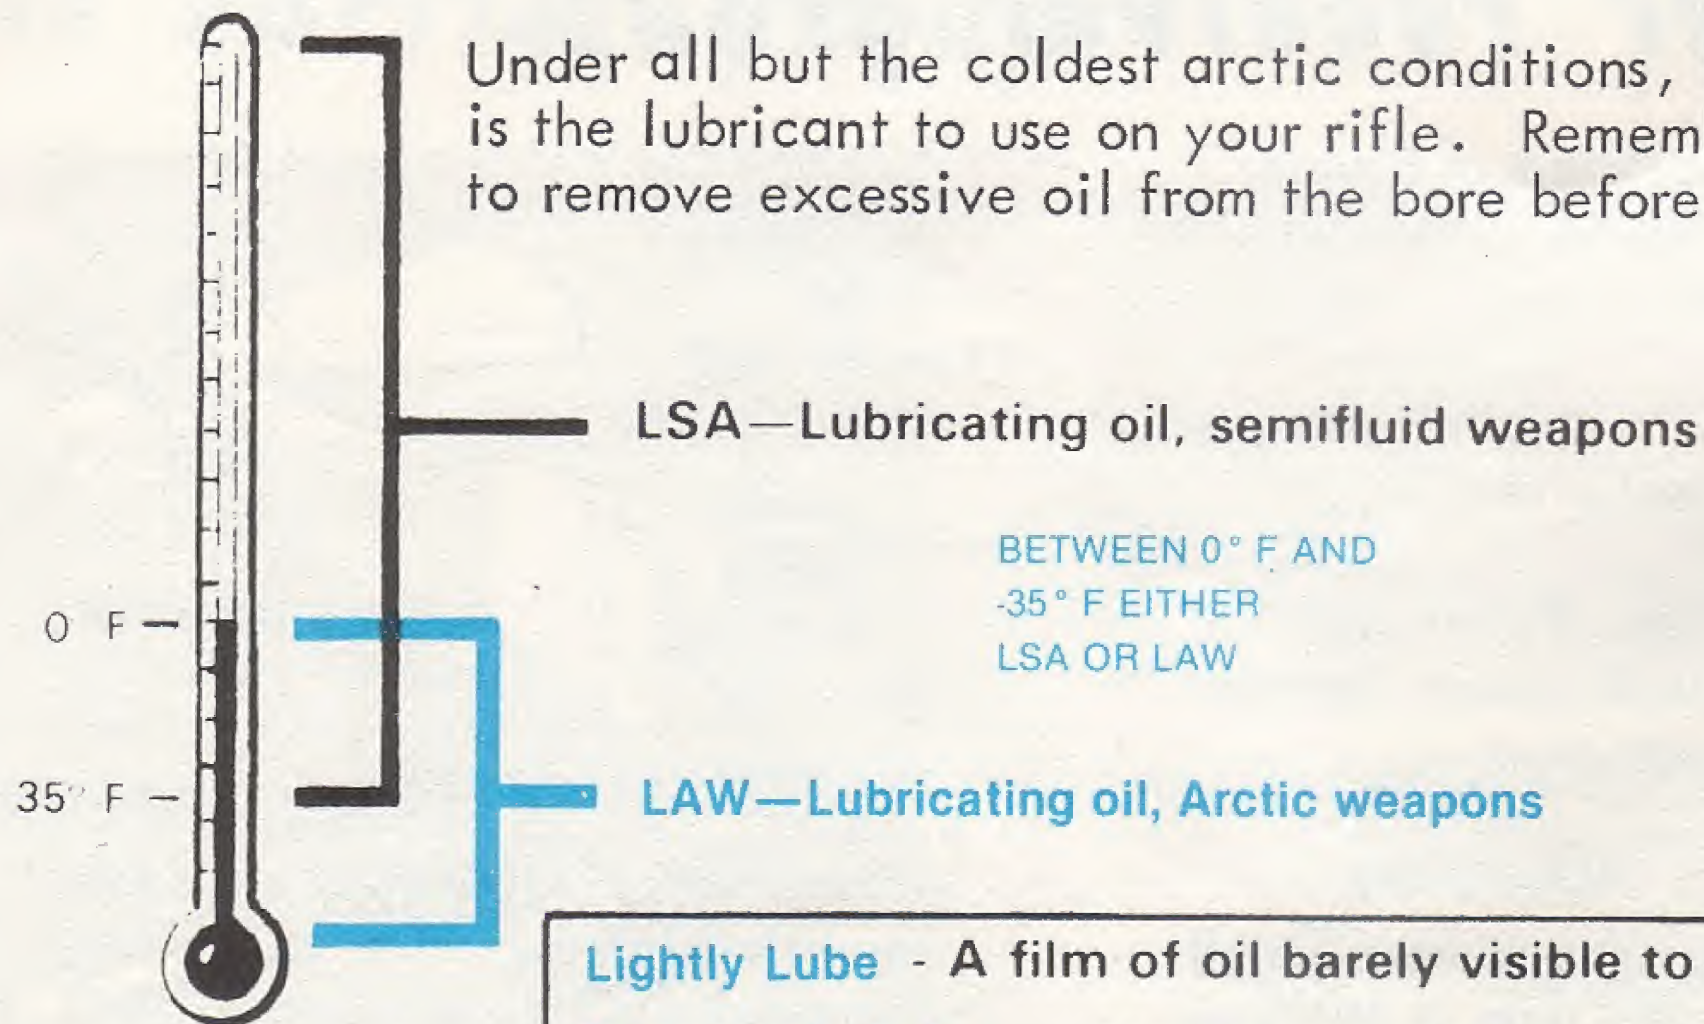

CAUTION

Do not use wire brush or any type of abrasive material to clean aluminum surfaces

LUBE GUIDE

Under all but the coldest arctic conditions, LSA is the lubricant to use on your rifle. Remember to remove excessive oil from the bore before firing.

Lightly Lube - A film of oil barely visible to the eye

Generously Lube - Heavy enough so that it can be spread with the finger

LUBRICATING

INSPECT-before assembly

WARNING DO NOT interchange bolts between rifles

BOLT - Cracks or fractures, especially in the cam pin hole area. Bolts that contain pits extending into the firing pin hole need replacing.

FIRING PIN RETAINING PIN - Bent, busted, badly worn

CAM PIN - Cracked, chipped, or missing

EXTRACTOR AND EXTRACTOR SPRING - Check extractor for chipped or broken edges in the area of the lip that engages the cartridge rim.

FIRING PIN - Bent, cracked or blunted end

IF PARTS ARE MISSING OR DEFECTIVE, SEE YOUR ARMORER

ASSEMBLY

1 Insert spring and buffer

2 Insert extractor and spring

New extractor has a silicone insert w/ spring. Be sure not to lose it.

If the spring comes loose, put the large end of spring in the extractor and seat.

3 Push in extractor pin

WARNING.
Don't switch bolts between rifles

4 Slide bolt into carrier

STAGGER RING GAPS TO STOP GAS LOSS

ASSEMBLY *cont.*

5 Replace bolt cam pin

GIVE CAM PIN A 1/4
TURN AFTER ASSEMBLY

6 Drop in and seat

7 Pull bolt back

8 Replace retaining pin

NOTE

Firing pin should not fall out
when bolt carrier group is
turned upside down

9 Engage, then push charging handle part way

10 Slide in bolt carrier group

11 Push in charging handle and bolt carrier group together

12 Join upper and lower receivers

13 Engage receiver pivot pin

ASSEMBLY *cont.*

CAUTION:
Selector lever must be
on safe or semi before
closing upper receiver

14 Close upper and
lower receiver
groups. Push in
takedown pin

15 PUT HANDGUARDS IN PLACE

CHECK FOR FULL
ENGAGEMENT

16 Snap on sling

(REMOVE MAG ... CHECK CHAMBER)

SELECTOR LEVER ON:

safe

Pull charging handle to rear and release. Place on safe. Pull trigger. Hammer should not fall

semi

Place selector in semi. Pull trigger and hold to rear. Hammer should fall. Pull charging

handle to rear and release. Release trigger and pull again. Hammer should fall

auto

Place selector in auto. Pull charging handle to rear and release. Pull trigger and hold to rear, hammer should fall. Pull

charging handle to rear and release. Release trigger and pull again. Hammer should not fall

STANDARD DAYLIGHT SIGHT

REAR SIGHT

FRONT SIGHT

REAR SIGHT - Has two apertures for range.

Unmarked aperture - 0 - 300 meter range.

L under aperture - 300-460 meter range

See page 39 for sight usage

LOW LIGHT LEVEL SIGHT SYSTEM (Promethium Sight)

NOTE: Not every rifle will have this sight

REAR SIGHT

FRONT SIGHT

PURPOSE:

Used during limited visibility. A weapon equipped with the PROMETHIUM front sight has only 4 "notches" of elevation per revolution, whereas the original sight had 5. The 7mm rear sight aperture is for night firing and limited visibility. The 2mm aperture is used to zero the weapon and engage targets to 460 M under normal conditions (see page 40 for sight usage)

CAUTION: The front sight post contains a small glass vial of radioactive Promethium 147. Take care not to bump, abuse, tamper or alter the post in any manner. DO NOT blacken or soot-up the front sight.

OPERATION - loading and

- 1 With hammer cocked, place selector lever on SAFE

- 2 Open bolt and eyeball chamber. Clear?

- 3 Push upward until magazine catch engages and holds magazine

- 4 Tap upward to make sure it's seated right

MAGAZINE MAY BE
LOADED WITH
BOLT ASSEMBLY OPEN
OR CLOSED

chambering a round

BOLT ASSEMBLY OPEN

BOLT ASSEMBLY CLOSED

BATTLESIGHT ZERO

TO ZERO THE RIFLE, YOU MUST HAVE THE FRONT SIGHT (ELEVATION) AND THE REAR SIGHT (WINDAGE) ADJUSTED SO THAT IT CAN HIT YOUR POINT OF AIM AT A GIVEN RANGE

NOTE.

In order to battlesight zero you adjust your sights so you can hit an aiming point at 250 meters. Zeroing can also be accomplished on a 25 meter range by adjusting the sights so that the bullet will strike 2.4 centimeters below the point of aim. If M16A1 has "promethium" sight and you can't see the vial after zeroing, turn front sight post one click down for use during periods of limited visibility

SIGHT ADJUSTMENT

LOW LIGHT & STANDARD

REAR SIGHT To adjust windage, depress detent and rotate drum to desired direction. To move point of impact to right, turn drum clockwise in direction of arrow and letter R. To move left, move drum counterclockwise. Each graduation (notch) moves the point of impact of bullet as indicated in chart.

FRONT SIGHT To adjust elevation, depress detent, rotate post. To raise strike of bullet, rotate post in the direction of arrow marked up. Reverse the direction of rotation to lower strike of bullet. Each graduation (notch) moves the point of impact of bullet as indicated in chart.

IMPACT		DISTANCE
STANDARD	LOW LIGHT LEVEL	
0.7cm (17/64in)	0.9cm (23/64in)	25 meters
2.8cm (1-3/32in)	3.5cm (1-3/4in)	100 meters
5.6cm (2-13/64in)	7.0cm (2-3/4in)	200 meters

USING LOW LIGHT LEVEL (PROMETHIUM) SIGHT SYSTEM

daylight firing

Use aperture marked L. Effective range is 250 meters (original battle sight zero) beyond which "Hold-Off" (aiming above desired point of impact) must be used. Aim about 11 in. at 350 meters, 22 in. at 460 meters. To become and remain proficient, practice "Hold Off".

night and limited visibility

Use unmarked (7mm) aperture. Obtain good sight picture using daylight hours procedure. After target detection, obtain good sight alignment by centering top of luminous portion of front sight post within 7mm aperture on target, and fire. Under certain

light conditions, front sight post can be seen, but you can't determine whether you are looking through above or to the side of rear sight aperture. Practice positioning stock against shoulder and looking through rear aperture.

CARE & CLEANING of PROMETHIUM SIGHT

handling and care

- The front post has a small glass vial containing radioactive Promethium 147.
- Take care when handling, not to bump the front sight post. DO NOT abuse, tamper or alter the post in any manner.
- Frequently check the sight post for damage. If damage is evident or suspected, have it checked by your unit armorer.

cleaning of front sight post

CAUTION: DO NOT use a wire brush to clean the sight.

Clean with toothbrush, bore swabs and Rifle Bore Cleaner (RBC), then dry.

IMMEDIATE ACTION

If your rifle stops firing before you do . . . **S.P.O.R.T.S.**

S.P.O.R.T.S. is an acronym* to help you remember the following actions -- **Slap, Pull, Observe, Release, Tap, Shoot.**

*ac-ro-nym: a word formed from the initial letters of each word in a group of words that convey a meaning or action.

1 **SLAP** upward on magazine to make sure it's properly seated.

2 **PULL** charging handle all the way back. **OBSERVE** ejection of case or cartridge. Eyeball chamber and check for obstruction.

3 If cartridge or case is ejected or chamber is clear, **RELEASE** charging handle to feed new round (Don't ride the charging handle)

4 **TAP** forward assist

5 Now **SHOOT** If it won't fire, look for trouble and apply remedial action

REMEDIAL ACTION

WARNING

If your rifle stops firing with a live round in the chamber of a hot barrel, remove the round fast. However, during training, if you cannot remove it within 10 seconds, wait 15 minutes with the rifle pointing in a safe direction. This way you won't get hurt by a possible ammo cook-off, which could happen 10 seconds after contact with a hot chamber.

If your rifle fails to fire after performing steps 1 thru 5, check again for jammed cartridge case

If a cartridge case is in the chamber, tap out with a cleaning rod.

IF YOUR RIFLE STILL FAILS TO FIRE, CHECK TROUBLESHOOTING

PROJECTILE LODGED IN BORE

WARNING

If an audible "POP" or reduced RECOIL is experienced during firing, immediately CEASE FIRE, remove the magazine (1), lock the bolt to the rear (2), and place the selector lever on the "SAFE" position (3). Visually inspect and/or insert a cleaning rod into the bore to insure there is not a projectile lodged in the bore (4).

DO NOT APPLY IMMEDIATE ACTION.

If a projectile is lodged in the barrel of the weapon, DO NOT attempt to remove it. Turn the weapon in to the armorer.

LIMITED PM CLEANING AS NEEDED

CLEAR YOUR RIFLE

1 Look for fouling in bore and chamber

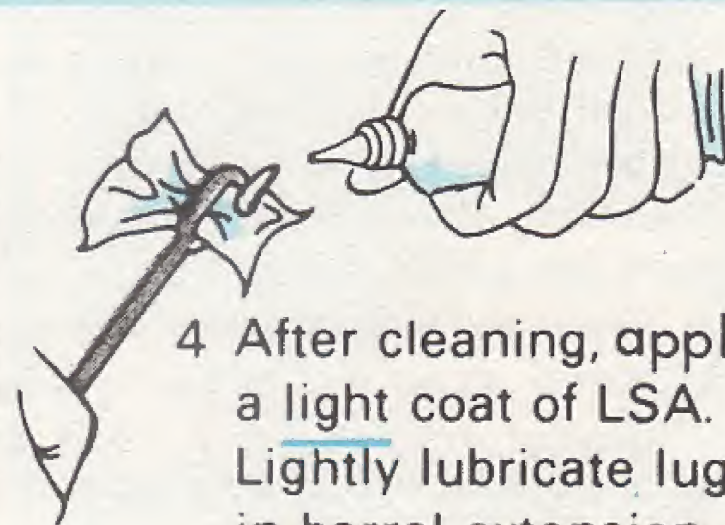

2 Remove bolt carrier group and clean carbon and oil from firing pin and all surfaces of bolt/bolt carrier with dry swabs. Clean

firing pin hole and bolt carrier key with pipe cleaner. Apply light coating of LSA paying special attention to slide and cam pin area

3 "Swab out" (from chamber to muzzle)

CAUTION: Don't bend or flex cleaning rod. Oh yeah, make sure swab goes clear through flash suppressor

4 After cleaning, apply a light coat of LSA. Lightly lubricate lugs in barrel extension

UNUSUAL CONDITIONS

EXTREME COLD-

- Clean and lubricate rifle with LAW
Keep it moisture free
- Operate controls thru their entire range, at intervals, to keep them from freezing up
- When your rifle is not being used and kept outside, protect it with a cover

HOT CLIMATES-

- Inspect rifle and bipod more frequently, especially the hidden surfaces of bolt carrier group, forward assist assembly and lower receiver components. Make certain they are lubricated using LSA
- When handling, make certain to wipe dry, as moisture could cause corrosion. After drying, lubricate with LSA

HOT, DRY CLIMATES-

Clean and oil rifle more frequently with LSA

DUSTY AND SANDY AREAS-

- Clean and lubricate your rifle more frequently
- Keep sand out of parts when inspecting, lubricating, or assembling rifle. Apply only a very light amount of lubrication on outside of rifle.
- Use magazine bag and muzzle cap for dust and sand protection.

CAUTION: Do not use magazine bag and muzzle cap on stored rifles.

AFTER FORDING
